3. FORWARD KINEMATICS II

3.3 Forward Kinematics

✓ The forward (or direct) kinematics is the transformation of kinematic information from the robot joint variable space to the Cartesian coordinate space;

- ✓ Finding the end-effector position and orientation for a given set of joint variables is the main problem in forward kinematics;
- ✓ Solving the forward kinematics problem is a process to determining transformation matrices ${}^{0}T_{i}$ to describe the kinematic information of link (i) in the base link coordinate frame;
- ✓ By usg the Denavit-Hartenberg notations and frames, we have

Orientation of frame
$$B_n$$

$$T_n = {}^0T_1(\theta_1){}^1T_2(\theta_2) \cdots {}^{i-1}T_i(\theta_i) \cdots {}^{n-1}T_n(\theta_n)$$

$$= \begin{bmatrix} R_n & \mathbf{d}_n \\ \mathbf{0} & 1 \end{bmatrix} \longrightarrow \text{Position of } o_n$$

Transformation of Two Frames

✓ The transformation matrix between two adjacent frames attached to link (i) and link (i + 1) is a fundamental block to the forward kinematics problem.

$$i^{-1}T_i: B_{i-1} \longrightarrow B_i$$

✓ Initially, frame B_i coincides with B_{i-1} . It becomes the present state after four steps of homogeneous transformations.

B_{i-1} is a global frame and B_i is a local frame

1.
$$B_{i-1}$$
 translates d_i along z_{i-1} $D_{z_{i-1}}(d_i)$
2. B_{i-1} rotates about z_{i-1} by θ_i $R_{z_{i-1}}(\theta_i)$

2.
$$B_{i-1}$$
 rotates about z_{i-1} by $\theta_i \frac{R_{z_{i-1}}(\theta_i)}{R_{z_{i-1}}(\theta_i)}$

3.
$$B_{i-1}$$
 translates a_i along x_i $D_{x_i}(a_i)$

3.
$$B_{i-1}$$
 translates a_i along x_i $D_{x_i}(a_i)$
4. B_{i-1} rotates about x_i by α_i $R_{x_i}(\alpha_i)$ commutative

Transformation Matrix

✓ By pre- or post-multiplications of four homogeneous transformation matrices, the overall transformation from frame B_{i-1} to B_i can be obtained by

$$= \begin{bmatrix} c\theta_{i} & -c\alpha_{i}s\theta_{i} & s\alpha_{i}s\theta_{i} & a_{i}c\theta_{i} \\ s\theta_{i} & c\alpha_{i}c\theta_{i} & -s\alpha_{i}c\theta_{i} & a_{i}s\theta_{i} \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

3.4 Non-standard DH Parameters

✓ The standard DH parameters will be inefficient if the mechanism is a closed chain where the base binary link connects both link 1 and link n, respectively. It will cause the ambiguity because the base link will have two different attached coordinate frames.

frame 3 frame 2

frame 1

frame 0

3.4 Non-standard DH Parameters

✓ In order to cope with the closed chain mechanism, standard DH parameters can be modified in the way that changing the location of the body attached coordinated frames.

Local frame *i* is setup at the distal end of the binary link

Local frame *i* is setup at the proximal end of the binary link

3.4 Non-standard DH Parameters

- 1. a_i is the distance between the z_i and z_{i+1} axes along the x_i -axis.
- 2. α_{i-1} is the angle from z_{i-1} to z_i axes about the x_{i-1} -axis.
- 3. d_i is the distance between the x_{i-1} and x_i axes along the z_i -axis.
- 4. θ_i is the angle from the x_{i-1} and x_i axes about the z_i -axis.

Link parameters α_i a_i Joint parameters θ_i d_i

- 1. B_{i-1} rotates α_{i-1} about x_{i-1}
- 2. B_{i-1} translates a_{i-1} along x_{i-1}
- 3. B_{i-1} translates d_i along z_i
- 4. B_{i-1} rotates θ_i about z_i

Homogeneous Transformation Matrix

✓ By pre- or post-multiplications of four homogeneous transformation matrices, the overall transformation from frame B_{i-1} to B_i can be obtained by

$$\begin{aligned} & \overset{i-1}{T_i} = R_{x_i-1}(\alpha_{i-1}) D_{x_{i-1}}(a_{i-1}) D_{z_i}(d_i) R_{z_i}(\theta_i) \\ & = \begin{bmatrix} c\theta_i & -s\theta_i & 0 & a_{i-1} \\ s\theta_i c\alpha_{i-1} & c\alpha_{i-1}c\theta_i & -s\alpha_{i-1} & -d_i s\alpha_{i-1} \\ s\alpha_{i-1}s\theta_i & s\alpha_{i-1}c\theta_i & c\alpha_{i-1} & d_i c\alpha_{i-1} \\ 0 & 0 & 0 & 1 \end{bmatrix} \end{aligned}$$

- ✓ An advantage of the non-standard DH method is that the rotation θ_i is around the z_i -axis and the joint number is the same as the coordinate number;
- ✓ A disadvantage is that the transformation matrix is a mix of i-1 and i indices.
