Line\Ray\Segment 模块提纲

```
from GeomBase import *

class Line:
    def __init__(self, P, V):
        self.P = P.clone()
        self.V = V.clone().normalized()
    def __str__(self): pass

class Ray:
    def __init__(self, P, V):
        self.P = P.clone()
        self.V = V.clone().normalized()
    def __str__(self): pass

class Segment:
    def __init__(self, A, B):
    def multiply(self, m):     # m 为矩阵
    def multiplied(self, m):
    def __str__(self):
    def length(self):
    def direction(self):
    def swap(self):
```
